

Homemade Goo Gone

This DIY alternative is a great way to remove the sticky label residue off recycled glass jars. With just some baking soda and oil, your goo will be gone!

Keyword: Homemade Cleaner Author: Beverly

INGREDIENTS:

- Baking Soda
- Oil (vegetable, olive, etc.)

INSTRUCTIONS:

1. Place your baking soda in a small bowl. However much baking soda you measured out, stir in half as much oil.
2. Stir together the baking soda and oil. The consistency should be about that of glue, somewhat thick but still able to pour off your spoon.
3. Dip an edge of paper toweling or an old cloth into your homemade goo gone mixture, and rub it around on the sticky area, scrubbing as you go to work on removing the sticky residue. Repeat this process until you have removed all the sticky residue.
4. Then wash your item with soap and water and wipe dry. If you see any remaining spots of sticky residue, repeat the process.

NOTES:

Some measurement suggestions are:

1 Tbl Baking Soda + 1/2 Tbl Oil

2 tsp Baking Soda + 1 tsp Oil

1/4 cup Baking Soda + 2 Tbl Oil
