The Protocol Highlights

This is a summary of key elements of the Collect-Budwig Protocol, designed to give you an idea of the thoroughness of our material. These topics and many more details are contained within our [extensive video series](#), explained completely by members of our team.

Introduction/Overview:

[OVERVIEW](#)[VIDEO PREVIEWS](#)[TESTIMONIALS](#)[CHAP](#)[CONSULTATIONS](#)[FREQUENTLY AS](#)

available. Both the Collect Protocol and the Budwig Protocol are known to be quickly effective, plus they avoid creating inflammation and swelling.

In addition to the two main treatments (Collect and Budwig), the protocol includes several other treatments which are very effective in getting rid of cancer cells, re-balancing the body (i.e. the inner terrain), and eliminating toxins from the body.

Webster Kehr, founder of CancerTutor.com, strongly advised cancer patients to work with an expert in their main treatment protocol. This protocol has excellent support available from Tiffany Redel (the daughter of Mike Vrentas). Michael has more than 17 years' experience in alternative medicine and designed this protocol. He developed a [video series with detailed information about the protocol](#). There is also [Skype support](#) available for personal consultations with his daughter Tiffany.

Do not attempt this protocol without viewing the video series. This article cannot detail all of the different situations cancer patients might face when using this protocol. Consultations are available after viewing the entire video series.

Five Important Details of the Collect-Budwig Protocol:

1. The key product in this protocol is a **nutritional powder** called **Collect**, which has shown excellent results with all forms of cancer and many other chronic or terminal health issues.
2. The **Budwig Diet** restores the **electrical charge** in the cells.
3. **Electromedicine** has the ability to safely and quickly **remove cancer cells from the body**. It also **shrinks tumors**, quickly in many cases, and it can **reduce pain** dramatically. It may not apply in some types of cancer or be cost prohibitive to many. The Collect-Budwig protocol may be used without the the use of a frequency generator. This information is covered in video series.
4. **Laetrile or B17** has been a major cancer treatment for several decades. It selectively **kills cancer cells safely**. It does not kill cancer cells so fast that it creates dangerous debris.
5. **Vegetable juicing** is critical for two major reasons. First, several vegetables are very high in anti-cancer nutrients. Second, by focusing on vegetable juice you are crowding out the bad foods that most people eat. 

Foundation (NCRF).

Fred completed four years of college pre-med and worked as a Surgical Organ Transplant Researcher. He is also a Bio-Chemist and cured himself of pancreatic cancer. The nutritional product Collect was created as a result of his research¹.

A cancer patient should start out by building up to four scoops a day. The scoop is in the can, but due to shipping may have to be gently removed as it may work its way down into the powder. Children should take smaller doses, and this is thoroughly covered in the video series.

A cancer patient (adults) may find they can advance quickly (starting at 1/2 scoop) to the four scoops or more. In cases of the very ill, one may have to work up very slowly so their body can adjust. This could mean starting with as little as a half scoop of the powder per day, and then work up as their body can handle it.

The [video series](#) will help fine tune the usage of the Collect product in much more detail, including many different case examples. This is a very powerful protocol which is why [Skype support is available](#).

The product Collect can be purchased by visiting their website www.collect.org. However, Collect is sold through practitioners under the label Trican which could increase its cost.

It is recommended that Collect be taken in its powdered form.

Collect also comes in pill or capsule form. However, it takes 25 capsules of Collect pills to equal one scoop. Thus, for example, if someone wanted to take five scoops of Collect they would need 125 capsules! For this reason, the capsule form of Collect is not recommended.

Use the Collect powder unflavored if possible. Using the flavored requires the consumption of more due to the volume added because of the flavoring. This can become a real issue on higher doses.

[Collect.org Vendor](#)

[NCRF Technical Information](#)

Note 1: Do not take the product Collect and the Budwig Diet products within one and a half hour of each other.

Treatment 2 – Budwig Protocol:

The Budwig Diet restores the electrical charge in the cells. Due to the number of rules when using the Budwig Diet or Budwig Protocol, a separate article has been written on the Budwig Protocol. This article is Part 2 of the Collect-Budwig Protocol: Budwig Diet

Here is a detailed article on how to make the Budwig Diet mixture: [Budwig Diet Mixture](#)

Note: If someone is using a feeding tube, organic plain Kefir (as a replacement for the cottage cheese) will work to break down the flaxseed oil. Use about four ounces of kefir to two tablespoons of flaxseed oil and thoroughly stir until the oil is gone. You may have to add more or less of the kefir. Additional feeding tube options are covered in detail in the video series.

Treatment 3 – High RF Frequency Generator and Plasma Ray Tube Amplifier:

Our experience has shown that the combination of Collect, Budwig, and the High RF Frequency Generator with Plasma Amplifier is a very potent combination. Each does something different and each is important for those who can afford an electromedicine device.

High RF Frequency devices are optional and may not be applicable for use in some cases. The Collect-Budwig protocol may be used **without** the use of a frequency generator. The [Collect-Budwig video series](#) covers in detail frequency generators that are effective and those that are not powerful enough and why. It also covers the history and use of frequency generators, sometimes referred to as a “Rife machines”.

The High RF Frequency Generator with Plasma Amplifier is based on the Rife Machine technology of the 1930s and 1940s. Dr. Rife designed his frequency generators to kill microbes which were inside of the cancer cells. His “carrier wave” was designed to get the other frequencies past the cell membrane to get to the microbes. What this device adds to the Collect-Budwig protocol in “**some cases**” is the ability to safely and quickly remove cancer cells from the body. There have been cases reported of tumor shrinkage and dramatic pain relief, but not in all.

Treatment 4 – Laetrile or Vitamin B17:

Laetrile or Vitamin B17 has been a major cancer treatment for several decades. It selectively kills cancer cells safely. It does not kill cancer cells so fast that it creates dangerous debris. In the video series there is a complete chapter (18) on the use and application of Laetrile, I.V. Laetrile, B17, Amygdalin and apricot seeds. By having this information prior to considering use of this, it will help to prevent side effect of **nausea, headache and vomiting** from taking too much too fast.

The best way to take laetrile is by I.V., but it is not always possible in the US or in different parts of the world. The most common way of taking laetrile is by eating apricot seeds, which are high in Vitamin B17. Laetrile tablets are also referred to as Amygdalin. The 500mg tablets are preferred over capsules and a very common way of taking this.

The effect of these can be very powerful and should not be started or used until listening to Chapter 18 in the video series. Some people can not take this orally, and this is discussed in the series with case examples as well.

<https://www.apricotpower.com/>

Treatment 5 – Vegetable Juicing:

Vegetable juicing is critical for two major reasons. First, several vegetables are very high in anti-cancer nutrients. Second, by focusing on vegetable juice you are crowding out the bad foods that most people eat.

Of course, the juicing would be of little value if you did not avoid foods which are feeding your cancer or creating an environment which is favorable to cancer cells (e.g. sugar, dairy products, etc. feed cancer cells and microbes).

A cancer patient should absolutely avoid soda pops, including diet soda pops, highly processed foods (e.g. sugar, white flour), coffee, etc. Eating bad foods, especially highly acidic foods, such as

highly processed foods.

It is NOT necessary to only drink vegetable juices, but a cancer patient should attempt to take about 40 ounces of vegetable juices daily. In the case of the very ill, one must start slowly when juicing and “build-up”, sometimes very slowly, to let the body adjust. Some may be able to build up to the full amount and others will not. Doing some is better than doing none.

The amount of vegetable juice one is able to consume will differ with each individual case. Be sure to spread out the juicing over several small drinks, every day. The 40-ounce volume is obviously for adults.

The “cancer diet” is also critical to stopping fast-spreading cancers. The alkaline environment created by a good “cancer diet” is literally the main technique to stop fast-spreading cancers in their tracks.

Treatment 6 – The Importance of Detoxification:

See the information in the “Cardinal Rule” section below, as this is a very, very important part of this protocol. This is covered in detail in the [Collect-Budwig Video Series](#).

Treatment 7 – Real Sunlight:

It is very helpful to get out in the sunlight for about 45 minutes a day. One needs to start slowly so as not to burn, maybe starting with as little as 15 minutes per day working their way up. Do NOT use any type of sunscreen. Sunscreens filter out certain wavelengths of light and can actually cause skin cancer.

Other Protocols and Products that May Interfere with Collect-Budwig:

This is an area very difficult to cover, as there are so many products and protocols being used by people throughout the world. The Collect-Budwig and More protocol, which I wrote and for which my daughter Tiffany provides support, is a very balanced protocol. If a person combines other products or protocols not mentioned in the video series with the Collect-Budwig protocol it's

alkaline water, or sometimes referred to as “high pH” water. This type of water or any type of water system that adds back in minerals to the water will interfere with the electrical charges or frequencies of the minerals “Collect” and interfere with the “Budwig” part of the protocol. These should never be used with Collect-Budwig.

In regards to other protocols being used throughout the world the same applies. In the Collect-Budwig protocol we are trying to dramatically change the inner terrain of the body, and at the same time provide the body the elements God created man from in an attempt to reset the body’s DNA sequencing. **Everything must be done in balance.** When using the Collect-Budwig protocol, high doses of any supplementation should be avoided, **unless noted**, as it will interfere with the balance of minerals, oils, etc., which the body requires. For example, a person would not want to be using high dose IV Vitamin C, IV glutathione, or IV mistletoe – just to mention a **few** when doing the protocol. If a person is going to do this, it should be done prior to using Collect-Budwig. One **exception** to this would be the use of IV Vitamin B17 “Laetrile” which has been used where appropriate with the protocol (and covered in the video series as well as in consultation).

For more detailed information on products and protocols that may interfere, listen to the video series or DVD. We will also provide you with the “Reference/Resource” document which contains a more-detailed list as well as my thoughts. Open up the Reference/Resource page and scroll down to the Collect-Budwig list of products and protocols which could possibly interfere with the protocol. Then **scroll down to attachment “F”** for the complete list.

Liver Flushes:

Liver flushes are covered in detail in the video series. See the Collect-Budwig “Reference/Resource” page for more information. It will be found under Liver and Gallbladder Flushes.

A liver flush, which is designed to kill the microbes, parasites, and remove debris from the organs along with coffee enemas **where possible**, is a major immune-building item which all cancer patients need to use. This is covered in the video series.

Cardinal Rule – Work with an Expert:

[OVERVIEW](#)[VIDEO PREVIEWS](#)[TESTIMONIALS](#)[CHAP](#)[CONSULTATIONS](#)[FREQUENTLY AS](#)

Almost by definition, this protocol will be used by advanced cancer patients, but can be used for any stage or type of cancer.

Upon elimination of toxins from the body we have heard time and again how much better a person feels almost immediately, leaving the person feeling calm and relaxed, clear headed and a sense of well-being. One needs to understand this in detail. This is one of many reasons for working with an expert when possible.

The critical issue of detoxification is covered in detail in the video series, but is beyond the scope of this article.

You must remember when dealing with the toxic load created by any of the fast-acting alternative cancer treatments, such as this one, you need to understand the symptoms of the detoxification load and all of your options for dealing with the toxic load, especially with regards to protecting the liver.

This is a potent treatment, do not underestimate the need for good information.

Published Support for this Protocol:

Because Mike Vrentas, who designed this protocol, has a finite amount of time to help cancer patients, and because this is a popular treatment, Mike has produced a video series. This video series includes over 14 hours of life-saving information dedicated to cancer and other debilitating chronic diseases including MS, diabetes, Lyme Disease, Scleroderma, high blood pressure, and much more. The information includes observations and personal experiences battling these types of issues. There is a great deal of critical information in this series.

To be blunt, because of the potential for unexpected symptoms and knowing how to handle them, it is unthinkable to attempt this treatment without [the Collect-Budwig video series](#). The information in these files is an essential part of this protocol.

Without watching the video series it is almost guaranteed the caregiver will do exactly the wrong thing to deal with the patient's weakness. I don't know how else to explain the importance of these lectures. The series can be viewed immediately. You may want to watch the series  even if you don't go on this treatment because it will help any cancer patient on any treatment.

One-On-One Support for this Protocol:

In almost all cases a patient needs customized information for their specific case. [Tiffany can be contacted by email](#) to set up a Skype consultation. Tiffany, Michael's daughter, is an expert in every phase of this treatment. She charges a very modest one-time consultation fee of \$175. There is no additional charge for continued support. It is well worth it. Tiffany is also an excellent motivator to get a patient to do it right.

Note for Brain and Lung Cancer Patients:

Swelling and inflammation can be very dangerous for brain cancer and lung cancer patients. There is nothing in this treatment that will create added swelling or inflammation. However, one reason you need to be careful about adding things to this treatment is that many alternative cancer treatments do cause temporary swelling or inflammation.

In other words, be very, very careful about adding items to this treatment. This is covered in detail in the Collect-Budwig Video Series and if you have additional questions or need additional help, Skype consultations are available with Tiffany Redel, Mike Vrentas' daughter.

Optimal Treatments to the Collect-Budwig Protocol:

There are several alternative cancer treatments which are not part of the Collect-Budwig Protocol partly because one of them is expensive and partly because this is already an extensive protocol. But for those who can afford the first treatment and/or has time to do the other treatments, they are highly recommended to be included in the Collect-Budwig.

Fucoidan

[Fucoidan](#) is a potent way to quickly and safely kill cancer cells. More than 100 scientific studies have demonstrated the effectiveness of "fucoidan" (the key sugar/nutrient in Fucoidan) to kill cancer cells.

[OVERVIEW](#)[VIDEO PREVIEWS](#)[TESTIMONIALS](#)[CHAP](#)[CONSULTATIONS](#)[FREQUENTLY AS](#)

product costs as much as the Collect.

MSM / CS Protocol — Methyl Sulfonyl Methane (MSM) / Colloidal Silver (CS)

The MSM/CS protocol is focused on killing microbes in the bloodstream and killing microbes inside the cancer cells (see [What Causes Cancer](#)). The [MSM](#) helps get the colloidal silver inside the cancer cells. A cancer patient cannot have too many treatments that can kill microbes in the bloodstream and inside the cancer cells.

Eliminating microbes from the bloodstream helps build the immune system because the immune system is burdened by about two pounds of microbes in the body. Killing microbes inside the cancer cells help revert cancer cells into normal cells. Thus, this protocol is very synergistic with the High RF Frequency Protocol.

This protocol is required for those who are not on the High RF Frequency Protocol.

This protocol is also absolutely required for any patient with cachexia because the MSM helps flush lactic acid out of the bloodstream. Those with cachexia should “build-up” (i.e. slowly increase the dose) the level of MSM until it is double the dose of MSM in the MSM/CS article.

The MSM/CS is also required for squamous cell carcinoma, sarcomas, uterine cancer, and melanomas because these types of cancer spread by microbes in the bloodstream. See this article: [Article For SCC, Melanoma, etc.](#)
