#### Introduction

Dimethyl Sulfoxide (DMSO) is a highly polar and water miscible organic liquid. It is essentially odorless, and has a low level of toxicity. DMSO is a dipolar aprotic solvent, and has a relatively high boiling point.

This bulletin is a compilation of Physical Properties data for this useful solvent.

#### Contents

Typical DMSO Properties .....	page 2

## Typical DMSO Properties (in Alphabetical order)

Figure 1

Parameter	Value
Auto ignition temp, in air	300-302°C (572-575°)
Boiling point (1 atmosphere)	189°C (372°F)
Coefficient of expansion	0.00088/°C
Conductivity (Electrical), 20°C @ 80°C	3x10-8 (ohm-1 cm-1) 7x10-8 (ohm-1 cm-1)
Critical heat flux	1.3x105 Btu/hr x ft-2 (4.10x105 J / s / m <sup>2</sup> )
Critical molar volume	2.38x10-4 m <sup>3</sup>
Critical Pressure	56.3 atm. abs.
Critical temperature	447°C (837°F)
Density, at 25°C ( <i>see Figure 3</i> )	1.0955 g / cm <sup>3</sup>
Dielectric constant, 1 MHz, @ 20°C @ 40°C	48.9 45.5
Diffusion coefficient	9.0x104 cm <sup>2</sup> / sec.
Dipole moment, D	4.3
Evaporation rate index @ 25°C	
Relative to n-butyl acetate	0.026
Relative to diethyl ether	0.0005
Flammability limits in air	
lower (100°C)	3 - 3.5% by volume
upper	42 - 63% by volume
Flash point (open cup)	95°C (203°F)
Flash point (closed cup)	89°C (192°F)
Freezing point	18.55°C (65.4°F)
Heat capacity, ideal gas, Cp(T°K)	6.94+5.6x10-2T -0.227x10-4T <sup>2</sup>
Heat capacity (liq.), 25°C	0.47 cal / g / °C
Heat of combustion	6054 cal / g
Heat of fusion	41.3 cal / g
Heat of solution in water at 25°C	-54 cal/g
Heat of vaporization at 70°C	11.3 kcal/mol
Henry's constant @ 21°C	991000
Molar freezing point constant	4.07°C / mol
Molar volume	71.2 cm <sup>3</sup> / g
Molecular weight	78.13
pKa	35.1
pK BH+	-2.7
Refractive index ND@25°C	1.4768

## Typical DMSO Properties, continued

Parameter	Value
Solubility parameters	
Hansen's	
- Dispersion	9.0 (cal / cm <sup>3</sup> ) <sup>1/2</sup>
- Polar	8.0 (ca 1 / cm <sup>3</sup> ) <sup>1/2</sup>
- Hydrogen bonding	5.0 (cal / cm <sup>3</sup> ) <sup>1/2</sup>
Hildebrand's	13.0 (cal / cm <sup>3</sup> ) <sup>1/2</sup>
Specific heat at 29.5°C	0.47± 0.015 cal /g /°C
Surface tension at 20°C	43.53 dynes / cm
Vapor pressure at 25°C (See Figure 1)	0.600 mm Hg
Viscosity, cP, at 25°C (See Figure 4)	2.0
Log octanol-water partition coefficient	-1.35

## Chemical and Thermal Stability of DMSO

DMSO is highly stable at temperatures below 150°C. For example, holding DMSO at 150°C for 24 hours, one could expect a loss of between 0.1 and 1.0%. Retention times even in batch stills are usually considerably less than this, and therefore, losses would be correspondingly less. It has been reported that only 3.7% of volatile materials are produced during 72 hours at the boiling point (189°C) of DMSO.

Slightly more decomposition, however, can be expected with the industrial grade material. Thus, about 5% DMSO decomposes at reflux after 24 hours. At most half of the weight of the volatile materials is paraformaldehyde. Dimethyl sulfide, dimethyl disulfide, bis(methylthio)methane and water are other volatile products. A small amount of dimethyl sulfone can also be found. The following sequence of reactions explains the formation of these decomposition products:

DMSO is remarkably stable in the presence of most neutral or basic salts and bases. When samples of DMSO (300g) are refluxed for 24 hours with 100g each of sodium hydroxide, sodium carbonate, sodium chloride, sodium cyanide, sodium acetate and sodium sulfate, little or no decomposition takes place in most cases. The results are shown in *Figure 18*.

Figure 18  
**Results of Reflux with DMSO,  
and various materials (24 hours)**

Compound (100g) in 300g DMSO	Reflux Temp., °C	DMSO Recovered % of Original	% Decomposition Products				
			DMS <sup>(a)</sup>	DMDS <sup>(b)</sup>	BMTM <sup>(c)</sup>	HCHO <sup>(d)</sup>	MM <sup>(e)</sup>
NaOH	185-140 <sup>(f)</sup>	93.7	63	31	-	-	-
Na <sub>2</sub> CO <sub>3</sub>	190	96.3	-	14	-	-	-

NaCN	148-164 <sup>(g)</sup>	100.0	-	-	-	-	-
NaOAc	182-187	97.0	22	33	8	20	-
Na <sub>2</sub> SO <sub>4</sub>	181-148 <sup>(h)</sup>	85.4		-			
DMSO Only	189	98.0	15	30	30	-	-

- (a) Dimethyl sulfide
- (b) Dimethyl Disulfide
- (c) Bis-(methylthio)methane
- (d) Methyl mercaptan
- (e) Formaldehyde

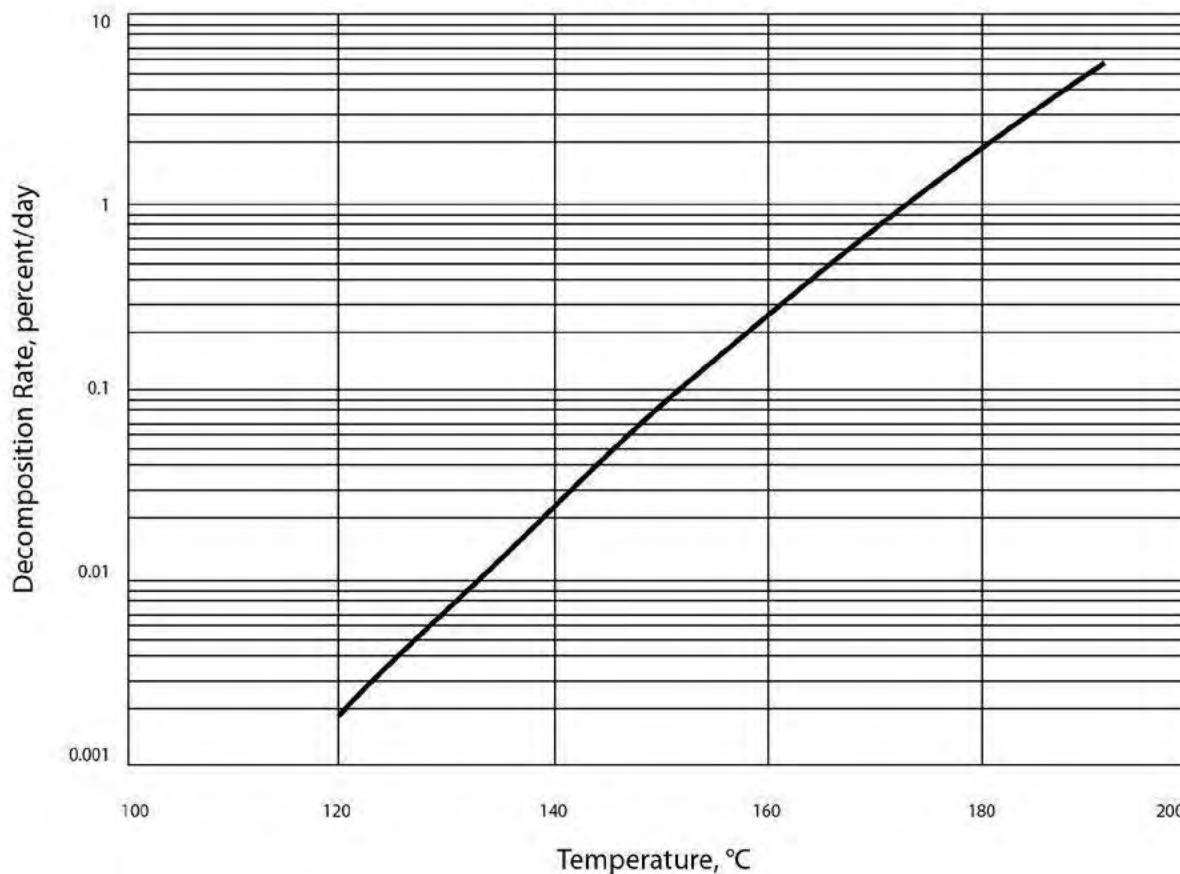

(f) Reflux temperature decreased from 185°C to 140°C over the first 16 hours.

(g) Reflux temperature was 148°C for 20 hours; increased to 164°C during the last 4 hours.

(h) Reflux temperature decreased gradually from 181°C to 148°C.

## Thermal Stability of DMSO

Figure 19

DMSO does not seem to be hydrolyzed by water and very little decomposition of DMSO takes place when it is heated under reflux for periods of 5 to 16 hours. The following tests, shown in Figure 16, have been performed: 1) 10 parts DMSO + 1 part water, 2) 60 parts DMSO + 5 parts water + 1 part sodium hydroxide, 3) 60 parts DMSO + 12 parts water + 1 part sodium bicarbonate, 4) DMSO alone.

Figure 20

**Refluxing of DMSO and Mixtures, for shorter periods**

Composition of Sample Parts	Reflux Temp., °C	Time, hr	Organic Products Composition, %			
			DMSO	DMS	DMDS	BMTM
10 DMSO: 1 H <sub>2</sub> O	152	5	100	0	0	0
		15	99.7	0.15	0	0.15
60 DMSO: 5H <sub>2</sub> O:1 NaOH	155	5	99.8	0.1	0.1	0
		8	99.3	0.6	0.1	0
60 DMSO: 12 H <sub>2</sub> O: 1 NaHCO <sub>3</sub>	131	6	99.9	0.1	0	0
		12	99.8	0.2	0	0
DMSO Only	191	5	99.8	0.1	0.1	0
		9	99.1	0.2	0.2	0.5
		16	99.0	0.2	0.2	0.6

DMSO is also stable in the presence of concentrated sulfuric or hydrochloric acid at 100°C for up to 120 minutes of heating at atmospheric pressure. Phosphoric acid causes more rapid decomposition of DMSO than does sulfuric or hydrochloric acid. Detected decomposition products are dimethyl sulfide, dimethyl disulfide, and, in smaller quantity, formaldehyde. The results are shown in *Figure 21*:

Figure 21

**Effect of heating DMSO with Concentrated Acids**
