**Question:** I'm wondering how people test the 35% that they buy. How do they know it is not watered down to 17.5% without testing?  
Can a 100ppm test strip help?

**Answer:** Yes. You will have make a dilute solution with it and test that. Take care to understand the difference in w/w and vol/vol percent.

No. 100ppm is 0.01%. Best to purchase chemical from a reputable supplier.
