Uses

This [medication](#) is used to treat certain [tapeworm](#) infections (such as neurocysticercosis and hydatid disease).

How to use Albendazole

Take this [medication](#) by [mouth](#) with meals as directed by your doctor, usually 1 to 2 times daily. If you or your child have trouble swallowing tablets, you may crush or chew your dose and take it with water.

For some conditions (such as hydatid disease), your doctor may direct you to take this medication in a treatment cycle (for example, twice daily with meals for 28 days then stopping the medication for 2 weeks). Carefully follow your doctor's instructions.

The dosage is based on your [weight](#), medical condition, and response to treatment.

Use this medication regularly to get the most benefit from it. To help you remember, take it at the same time(s) each day. If your doctor directs you to take this medication in a treatment cycle, it may be helpful to mark the calendar with a reminder of when you need to restart the medication.

Continue to take this medication until the full prescribed amount is finished, even if symptoms disappear after a few days. Stopping the medication too early may result in a return of the infection.
